LANGUAGES

Spanish (native)
English: B2 Cambridge

EDUCATION

Game Design and Development Master
EVAD: Sept 2022 - Dec 2023

Web application developer - Dual
CESUR: Sept 2017 - June 2019

Developer of applications for Android devices
UMA: Summer 2017

ABOUT ME

Frontend Engineer and Technical Lead specialized in design systems, scalable component architecture, and AI-driven automation for frontend engineering.

I led the development of the Chi Design System, used by 200+ developers across Lumen, improving consistency, performance, and engineering quality at scale.

My work combines advanced frontend engineering with automation frameworks, MCP tooling, and AI-assisted workflows that accelerate delivery, reduce defects, and enhance developer experience.

I thrive in collaborative environments where I can mentor teams, define long-term technical strategy, and build robust ecosystems that empower developers.

CAREER HIGHLIGHTS

Technical Lead of the Chi Design System (200+ Developers)

As the Technical Lead of Lumen's Chi Design System, I guided the architectural direction, component strategy, and adoption across multiple engineering teams.

I ensured consistency, performance, and accessibility while enabling scalable UI development for more than 200 developers. My leadership helped establish Chi as a core engineering asset within the organization.

Built and Maintained 50+ Reusable Components

Designed, developed, and maintained a large suite of reusable components using StencilJS, Vue 3, and TypeScript, ensuring high performance, accessibility, and cross-browser compatibility.

These components became foundational building blocks for multiple applications, significantly reducing development time and improving UI consistency.

Designed an MCP Automation Framework (27+ Custom Tools)

Architected and implemented a Model Context Protocol (MCP) automation framework with over 27 custom tools. This system automated key workflows such as component scaffolding, documentation generation, testing, refactoring, and maintenance.

The framework dramatically accelerated development cycles and standardized engineering practices across teams.

Reduced UI Defects with Automated Visual Regression Pipelines

Implemented automated visual regression testing pipelines using BackstopJS, enabling early detection of UI inconsistencies and regressions.

This initiative reduced visual defects, improved release confidence, and strengthened the overall quality of the design system and dependent applications.

Migrated Large-Scale Applications from Vue 2 → Vue 3

Led the migration of multiple production applications from Vue 2 to Vue 3, including architectural redesign, dependency updates, and compatibility adjustments.

Improved CI/CD Workflows Across the Organization

Enhanced CI/CD pipelines using GitHub Actions, Jenkins, Kubernetes (Rancher), and AWS, optimizing build times, deployment reliability, and automation coverage.

Introduced quality gates, automated testing, and environment consistency improvements that strengthened engineering productivity and delivery speed.

Mentored Developers and Established Engineering Standards

Provided mentorship, onboarding, and technical guidance to new and existing team members. Defined coding standards, architectural guidelines, and best practices that improved code quality, accelerated onboarding, and fostered a culture of engineering excellence across teams.

AI & AUTOMATION SKILLS

AI-Assisted Development

Advanced use of GitHub Copilot for code generation, refactoring, and documentation, AI-driven workflows integrated into daily development processes.

Cursor Automation

Creation of custom Cursor rules to standardize coding patterns and automate workflows, development of Cursor skills to accelerate repetitive engineering tasks.

Model Context Protocol (MCP)

Implementation of an MCP for the design system with 27+ custom tools, automation of component creation, documentation, testing, and maintenance through MCP.

AI-Enhanced Engineering Practices

AI-assisted refactoring and code quality validation, use of AI agents to streamline testing, documentation, and development pipelines.

TECH STACK

Frontend Development
JavaScript (ES6+), TypeScript. Vue 3, Nuxt 4, StencilJS & Web Components, HTML5, SCSS

Architecture & Engineering
Design systems (Chi, UXPin, Figma), reusable component design, asynchronous services, performance optimization & accessibility

Testing
Cypress, Playwright, BackstopJS, Vitest

DevOps & CI/CD
Jenkins, GitHub Actions, K8S (Rancher), AWS

Collaboration & Leadership
Git/GitHub, Agile methodologies, Mentoring, onboarding & cross-team communication, Technical decision-making & documentation

EXPERIENCE

TECHNICAL LEAD – CHI TEAM

LUMEN

2023 - PRESENT

Technical Lead responsible for building and maintaining Lumen's Chi component library, used by 200+ developers across the organization.

Led the creation and improvement of 50+ reusable components, onboarded and mentored new team members, and supported external teams integrating Chi.

GitHub: https://github.com/CenturyLink/Chi

Key Responsibilities

- Development of new web components using StencilJS and Vue 3.
- Creation of asynchronous services and component libraries for UXPin and Figma.
- Code quality validation: structure, security, and cross-browser/ device compatibility.
- Project architecture design and CI/CD management using Jenkins, GitHub Actions, Kubernetes/Rancher and AWS.
- E2E testing with Cypress and Playwright; visual regression testing with Backstop.
- Version control with Git/GitHub and merge request reviewing.
- Documentation using Nuxt 4, TypeScript, Vue 3, and native JavaScript.
- Migration of applications from Vue 2 to Vue 3.

Tech Stack

JavaScript (ES6+), TypeScript, HTML, SCSS, Vue 3, StencilJS, Nuxt 4, GH Actions workflows. AWS, Cypress, Playwright, BackstopJS.

SENIOR FRONTEND ENGINEER (CONTRACTOR) – CHI TEAM
VIPIRSA - *Lumen Contractor*
2021 - 2023

Senior Frontend Engineer embedded in Lumen's Chi team, contributing to the development and evolution of the Chi component library and its frontend ecosystem.

Focused on building reusable components, improving architecture, and supporting cross-team collaboration within Lumen's engineering organization.

GitHub: https://github.com/CenturyLink/Chi

Key Responsibilities

- Development of reusable UI components using Vue 2/3, StencilJS, and TypeScript.
- Contribution to the Chi design system and its documentation.
- Implementation of frontend architecture improvements and performance optimizations.
- Collaboration with product, UX, and engineering teams across Lumen.
- Code reviews, quality validation, and adherence to coding standards.
- Support in testing workflows (unit, integration, and visual regression).
- Participation in Agile ceremonies and cross-team coordination.

Tech Stack

JavaScript (ES6+), TypeScript, HTML, SCSS, Vue 2/3, StencilJS, Nuxt 3, Jenkins, Cypress, BackstopJS.

MIDDLE FRONTEND DEVELOPER
EY
Feb 2021 - Jul 2021

Frontend developer in the Health department, contributing to the development of a new web application using Angular 11.

Focused on building scalable components, implementing asynchronous services, and ensuring code quality, performance, and cross-platform compatibility.

Key Responsibilities

- Development of new UI components and Angular modules.
- Implementation of asynchronous services and integration with backend APIs.
- Code validation to ensure proper structure, security, and compatibility across browsers, devices, and operating systems.
- Maintenance and refactoring of existing codebase.
- Development of unit tests using Jasmine and Karma.
- Contribution to frontend architecture and PWA (Progressive Web App) features.
- Use of PostgreSQL for data handling and integration.
- Version control with Git/GitLab and participation in Agile workflows using Taiga.

Tech Stack

Angular 11, TypeScript, JavaScript, HTML5, SCSS, Spring, PostgreSQL.

JUNIOR FRONTEND DEVELOPER
INDRA
Jul 2019 - Feb 2021

Frontend developer in the Transportation department, contributing to the development of a new web application using Angular 7.

Focused on building UI components, implementing asynchronous services, and ensuring code quality and cross-platform compatibility.

Key Responsibilities

- Development of new UI components and Angular modules.
- Implementation of asynchronous services and integration with backend APIs.
- Code validation to ensure proper structure, security, and compatibility across browsers, devices, and operating systems.
- Maintenance and refactoring of existing codebase.
- Development of unit tests using Jasmine and Karma.
- Use of Cassandra for data handling and integration.
- Version control with Git/Bitbucket and participation in Agile workflows using Jira.

Tech Stack

Angular 7, TypeScript, JavaScript, HTML5, CSS3, Spring, Cassandra.

JUNIOR FRONTEND DEVELOPER (INTERN)
ACCENTURE
Sept 2017 - Jun 2019

Frontend developer in international aviation-sector projects, focusing on learning and applying Angular 6 to build and maintain web application components.

Collaborated with multidisciplinary teams and worked within Agile environments using Jira and Confluence.

Key Responsibilities

- Learning and specialization in Angular 6 within real production projects.
- Development of new UI components and contribution to frontend modules.
- Maintenance and refactoring of existing codebase.
- Version control using Git and Bitbucket.
- Participation in Agile workflows with Jira and Confluence.

Tech Stack

Angular 6, TypeScript, JavaScript, HTML5, SCSS, Java, Git/Bitbucket.
